While reviewing the image immediately after recording Push the joystick toward. The flash features the redeye reduction function. Options auto The flash fires automatically according to the brightness of the subject. redeye reduction, auto The flash fires automatically according to the brightness of the subject. Drive Mode Continuous Shooting and Exposure Bracketing Take a series of pictures of a moving subject or record the same picture in 3 levels of exposure in order to choose later the picture you like the best. PHOTO 2 Press fully and hold it pressed down. A series of still images will be recorded as long as you hold the button pressed. XPOSURE RACKETING PHOTO Press, first halfway to. O CAPTURE THE STILL IMAGE 1 Play back the scene containing the picture you want to capture. Move the zoom lever toward W. The still image index screen appears. Select the memory from which you want to copy the still images. When using Canon printers you can print the same still image multiple times on the same sheet of paper.After a short while, turn on the camcorder and restore the USB connection. Connect the camcorder to the printer using the supplied USB cable. Connection. Refer to Connection Diagrams 80.

Connections that require cables or accessories not supplied with the camcorder are marked with an asterisk; prepare the necessary equipment in advance. Playback on an HDTV using one of the highdefinition connections will ensure the best playback quality. Turn off the camcorder and the TV.

Connect the camcorder to the TV. Because space on the memory is limited, make sure to back up your movies onto a computer on a regular basis. This is very convenient, for example to play back your discs even in a location where an AVCHDcompatible DVD player is not available. Refer to Connection Diagrams 80. Recording External device Load a blank cassette or disc and set the device to record pause mode. Camcorder Locate the scene you wish to copy and pause playback shortly before the scene. IRST TIME CONNECTION TO A COMPUTER RUNNING INDOWS Windows users only The first time you connect the camcorder to the computer, you need also to select the CameraWindow autolaunch setting. You can set transfer orders for up to 998 still images. Selecting Still Images to Transfer Transfer Order Set the transfer orders before connecting the camcorder to the computer. Appendix Menu Options Lists Menu items not available appear grayed out in the FUNC.For details about how to select an item, refer to Using the Menus 27. The focus assist function will be cancelled when you start recording. Consult your dealer or a Canon Service Center if the problem persists.Buy a new battery pack.Consult a Canon Service Center. The CHG charge indicator flashes rapidly. one flash at 0.5second intervals Charging has stopped because the compact power adapter or the battery pack is faulty. Consult a Canon Service Center. The CHG charge indicator flashes very slowly. Horizontal bands appear on the screen. This is a phenomenon typical of CMOS image sensors when recording under some types of fluorescent, mercury or sodium lamps.

The camcorder is connected using the optional HTC100 HDMI Cable, but there is no picture or sound from the HDTV. CANNOT COMMUNICATE WITH THE BATTERY PACK CONTINUE USING THIS BATTERY PACK You attached a battery pack that is not recommended by Canon for use with this camcorder. CANNOT COPY The total size of the scenes you selected to copy exceeds the available space on the memory card. Delete. Replace the memory card with one rated Speed Class 2 or higher. NAMING ERROR The folder and file numbers have reached their maximum value. If a dialog appeared on the computer screen, close it and then reconnect the USB cable. Wait until the DVD burner dries completely before resuming use. NO IMAGES There are no still images to add to the disc. NO SCENES There are no movies to add to the disc. Consult a Canon Service Center refer to the list included with the printer to replace the ink absorber. INK ERROR There is a problem with the ink. Be careful when closing the LCD panel. Take the necessary precautions when you dispose of the camcorder or memory card, for example by physically damaging it to prevent the leakage of private data. Consult a Canon Service Center for information on plug adapters for overseas use. Playback on a TV Screen. Accessories that are compatible with the Advanced Accessory Shoe cannot be attached to this camcorder. This product is designed to achieve excellent performance when used with genuine Canon accessories.The effective usage time of the battery pack may decrease when recording in cold surroundings, when using the brighter screen settings, etc. This mark identifies genuine Canon video accessories. When you use Canon video equipment, we recommend Canonbrand accessories or products bearing the same mark. Exif Print is a standard for enhancing the communication between camcorders and printers.

By connecting to an Exif Printcompliant printer, the camcorder's image data at the time of shooting is used and optimized, yielding extremely high quality prints. Errors and omissions excepted. Please try your search again later.And, like all Canon VIXIA camcorders, the HF11 features a Canon HD video lens, FULL HD CMOS Sensor, and Canon's exclusive DIGIC DV II image processor. Create the look and feel of Hollywood movies with the HF11's 24p Cinema Mode and even use Canons Photo Grabbing function to capture still images from previously recorded video. If online video posting and sharing interests you, the HF11's 30p mode provides the perfect frame rate for the web and delivers clarity for fastaction subjects. The HF11 offers the unparalleled combination of Canon's exclusive SuperRange Optical Image Stabilizer to stabilize a wide range of movements, Instant AF for accurate focusing that's critical for HD, a builtin video light to easily shoot in dark settings, and a 2.7inch MultiAngle Vivid Widescreen LCD that allows you to view from various angles with true color representation and contrast. The HF11 features the latest HD technology, excellence in Canon optics and engineering in a compact, sleek design to deliver the

high level of performance youve come to expect from Canon. Canon HF11 Highlights Dual Flash Memory Taking Video to the Next Level Canon's breakthrough use of Dual Flash Memory the ability to record to an internal Flash drive as well as a removable SDHC memory card allows consumers to experience a new level of performance, style and flexibility. It boasts a number of advantages and enduser benefits for maximum convenience and flexibility. Since Flash Memory is a solidstate memory format and has no moving parts, the camcorder can be smaller, sleeker, more compact and lighter than ever before, allowing it to be carried anywhere.

Dual Flash Memory allows consumers to record video to the camcorder's internal Flash drive even if they do not have a memory card. When the internal Flash drive becomes full, footage can be easily transferred to a SDHC memory card and when it comes time to view their video, the card is simply popped into a memory card reader in a computer or a compatible HDTV for instant viewing. Furthermore, having a SDHC memory card slot allows for expandability, since greater capacity can be added in the future by purchasing additional cards. Flash Memory is a highly stable method of storage, and as a result, accidental jolts to the camcorder are much less likely to result in failure or data loss. Consumers will also enjoy the camcorders low power consumption, which leads to longer battery time. Compared with other types of storage, Flash Memory camcorders are able to read and write data faster, so users can start recording faster and have immediate access to their recorded scenes. Record Up to 12 hours 15 minutes of High Definition Video on an internal 32 GB Flash drive. The HF11 enables extended high definition videos to be recorded to the internal 32 GB Flash drive or directly to secure digital high capacity SDHC cards. Enjoy the great convenience of taping directly to the drive or the flexibility of convenient, easily interchangeable recording media. Genuine Canon 12x High Definition Video Lens The HF11 comes equipped with a 12x HD Video lens. An aspherical lens is used to help achieve low aberration and high resolution. The lens also features super spectra coating technology which lowers flare and ghosting. A gradation ND system is used for better exposure in bright shooting situations. This lens design creates true HD image quality. RGB Primary Color Filter Whether youre shooting video or photos, you will appreciate the HF11 stunning, highdefinition image production. For rich, accurate color, the HF11 uses an RGB Primary Color Filter.

It separates light into red, green, and blue color components, resulting in vibrant images with naturallooking tones similar to what you'd obtain from 3CCD camcorders. Canon 3.3 Megapixel Full HD CMOS Sensor 1920 x 1080 The HF11 features a newly developed; Canon manufactured HD CMOS Image Sensor. Similar to its use in Canons EOS Series Digital SLR Cameras, the CMOS Sensor reproduces high resolution images as true HD movies. Canons HD CMOS Sensor acquires image information at 1920 x 1080 pixels. Canon's HD CMOS Sensor also features onchip noise reduction technology. This low noise technology feature means that even in dimlylit scenes, the signals from each pixel are as pure as possible, with minimal noise or other aberrations. DIGIC DV II Image Processor DIGIC DV II is the latest generation of Canons exclusive DIGIC DV signal processing technology designed specifically for HD. Thanks to DIGIC DV II image processing, the HF11 produces video with improved color reproduction especially in skin tones, and dark and light scenes. It also uses a hybrid noise reduction system that employs two types of noise reduction for images that are crystal clear. Since video and still images have different color requirements, DIGIC DV II HD digital signal processing ensures optimal image quality for both HD video and still images. 1920 x 1080 Full HD Recording The Canon HF11 not only captures images in Full HD, but records and outputs 1920 x 1080 as well, so you get Full HD from lens to screen. Experience the ultimate in clarity and detail. Instant AF Auto Focus Instant AF is Canon's new and advanced autofocus system required for High Definition. Using a Hybrid Control system, the Instant AF makes it easy to focus on previously difficult subjects. It dramatically decreases the time it takes to achieve proper focus and increases accuracy especially in lowlight and highbrightness situations.

SuperRange Optical Image Stabilizer The HF11 features Canon's SuperRange Optical Image Stabilization OIS. Utilizing a Hybrid detection method combining vector and gyro detection method corrects camera shake instantly for steady shots. And unlike other optical stabilization systems, Canons Super Range OIS covers a wide range of movements while preserving image quality. It is even effective while taking photos. 24Mbps Recording Offers the highest bit rate in AVCHD for High Definition video that captures extraordinary lifelike tonal quality and exceptionally fine detail. 24p Cinema Mode 24p Cinema Mode is a feature demanded by professional filmmakers and previously, only available on prolevel camcorders. 24p Cinema Mode enables all aspiring movie makers achieve a professional filmlook. This mode is actually two different features, which can be used independently, or together, depending on the user's preference. 1. The captured frame rate changes to 24p the same frame rate as movie film. 2. The HF11 changes the color and tonal characteristics to make you feel like you are watching a movie in the theatre. 30p Progressive Mode 30p Progressive mode is a progressive format that is the perfect frame rate for the web because it delivers clarity for fastaction subjects. Plus, it is ideal for displaying crisp images on your home theatre system or computer monitor. Before now 30p was exclusively featured on prolevel camcorders but Canon now offers the widest frame rate options for every videographer. Note Records in 60i onto memory card. Mini Advanced Accessory Terminal The Advanced Accessory Shoe allows the use of additional accessories such as Canons video light and directional microphone. Compared with Canon's original Advanced Accessory Shoe, the new version is 50% smaller in size. Intelligent LithiumIon Battery The remaining battery time is now indicated down to the minute, so you will never have to guess the recording time available. 3.
